

TAJIMA

Usability, Quality, and Creativity

Innovations to speed up and simplify the digitizing process.

- Action symbols surround your selection for one click edits and movements.
- Load a background image and choose the closest thread color available.
- New mass upload for PulseCloud to get all your designs stored quickly.
- Faster flyout menus and other user interface improvements to speed up your work.
- Various resequencing options in the right click menu for quick changes.
- Select segments with Vertex Select, Drag Anchor Path, and Slice without switching tools.
- Easily add and remove trims and lock stitches with left and right clicks.
- Select multiple nodes across multiple segments to do all your editing at once.

Usability, Quality, and Creativity

Create top quality designs and ensure they turn into top quality final products.

- Configure and save machine settings (Presserfoot, iTM, Machine Messages, RPM) within your design file using DG's powerful PXF format, saving setup time at the machine.
- Work with Tajima's recommended machine formats (TCF and TBF) for optimal production quality.
- New features to help make 3D puffy foam a breeze.
- Revamped Garment Tool and Quotation Estimator for creating custom quotes.

New features to maximize creativity.

- Fractal fill for both beads and sequins.
- Variable Stitch Width for when you need a rough and random look.
- Evolve feature to gradually turn one shape into another.
- Sun Stitch for fashionable designs.
- Clipping Mask gives an eye-catching layered look.
- Many new fonts included!
